Question 1.

Form Validation- (Use Codeigniter or Core PHP)

Name - only alphabetic characters allowed (a to z), No numeric allowed

Mobile Number - only digits allowed (0-9)

Email Id - can't be submitted without @ symbol

Password - any character, numeric, special keys allowed

Confirm Password - Show password match or didn't match

File Upload - Multiple File Upload (Images)

Submit
After Submit save the data in the database and view the data in a <div>
without reloading the page Data has to be shown after submission but without the page reload

Note - All the validation will be done on the key up base not on submit

Question 2.

Database – (Use MYSQL) and read solve question from the table

Table - users
column

id name mobile status location

1 A 987 active Delhi

2 B 987 active Chandigarh

3 C 987 active Chandigarh

4 D 987 active Jaipur

5 E 987 Inactive Jaipur

6 F 967 active Chandigarh

7 G 967 active Jaipur

8 H 967 Inactive Chandigarh

1 - You have to fetch the values of id with the condition - Mobile number same (you are not aware of the mobile number values) and status active

2 - location columns arranged in descending order. i.e. location with most occurrences will be at the top then below and so on

Note - This will be done in a single-line query, if done in multiple queries then it will be discarded from the task.

Question 3.

Create a Social Login page - Google

Question 4.

Google Location

- Make a form with Latitude and Longitude text box

After submitting find the location name through latitude and longitude
